Description

I'm talking about how you see a little bit of a project overview on the projects page, or a partial comment on the activity page. If the chunk that's displayed includes things like headings or tables, it can really mess up the flow of the page it's included in. It doesn't actually 'break' the layout, but it doesn't look right. I think it'd be better if it only included regular text.

What you really require as custom fields of string/long-text type in the Project page and Version etc. should be wikified.

If you want this, you can use either of the two plugins:

- Textilizable Custom Fields
- Extended fields

Will personally recommend the first one if you want to textilize fields which are already been created. I am using both.
