## Description

Hello all

i need an immediate help please, i have an issue that i need to send the issue to more than one assignee and i cant add them in groups because the combination is changable, i add new costum field with type (user) but the selected user(s) from this menu doesnt receive any notifications and doesnt have permission to access this issue.

i tried a plugin with name (custom\_users\_as\_assignees) but after i install the plugin my redmine fails and i have to remove the plugin from the directory to work.

please help me fixing this problem as i need it immediatly
