SUGGESTIONS: When a user is allowed to ADD (issues, notes, & queries), this entitle the user to OWN these items. Ownership makes the user eligible to EDIT, MOVE, & DELETE when awarded on PERMISSIONS. A project manager (user) has full access to every resources of the specific project only. A project sponsor (user) has VIEW access to every resources of the specific project only when awarded on PERMISSIONS.

- File *PERMISSIONS_Roles__Access_rights.doc* added

- File *PERMISSIONS_Roles__Access_rights_matrix.xls* added

Thank you Eric. Much oblige.

Allow me to explain myself better here is the gist of my suggestion:

SUGGESTIONS:

PERMISSIONS to (projects, issues, boards, documents, news, notes, repositories, & other resources)

Suggestions: Access rights within the project.

A ROLE, when allowed to ADD, by default this will entitle the user to OWN the item. Ownership makes the user eligible to be awarded to VIEW, EDIT, MOVE, or DELETE on PERMISSIONS.

Likewise, when a USER is ASSIGNED to any items in PERMISSIONS to list (see above), the user is eligible to be awarded to VIEW, EDIT, MOVE, or DELETE on PERMISSIONS.

A project manager (user) may be awarded full access to every resource of the specific project only, almost like it is today.

A project sponsor (user) may be awarded VIEW access to every resources of the specific project only when awarded on PERMISSIONS.
