Description
The include macro in Wiki should have the ability to include single section of a page, like this:
{{include(Page#Section)}}

+1. This would be very helpful.
Are macros part of the textile wiki engine, or are they added by the Redmine source?

- Category set to Text formatting

Is this feature already added?
This would be very helpful when using larger pages and get a block of information instead of the entire page.

+1
Hello everyone,
I'd like to know how this issue is proceeding.
This feature would be very powerful since I have lots of wiki pages with duplicated contents.
Tks :)

+1 I make this feature in plugin. [http://www.redmine.org/plugins/redmine_include_macro_extension](http://www.redmine.org/plugins/redmine_include_macro_extension)
I hope to be merged to Redmine.

- File 23216.patch added
+1, I thought it would be very useful.
So, I made a patch, with reference to [redmine_include_macro_extension](http://www.redmine.org/plugins/redmine_include_macro_extension) plugin made by @Taiki I.
We will be able to include a section of wiki page, by writing the macro as below.

```bash
{{include (Page, Section)}}
```

- Target version set to Candidate for next major release
