Category:	Estimated time: 0.00 hour
Target version:	Affected version:
Resolution: No feedback	

Description

Hello, i'm a russian user of Redmine, so sorry for my bad English :(
I have installed and configured Redmine on FreeBSD 7.2 with Apache22 and integration with SVN
I have some trouble with automatic repository creation by reposman.rb and through crontab

Normal operation in cli:
#/usr/local/bin/ruby /usr/local/www/redmine/extra/svn/reposman.rb -r rm -s /data/svn/repositories -o www -u <http://rm/svn/> -v >>
/var/log/reposman.log

treating project redmine
repository /data/svn/repositories/creatf registered in Redmine with url <http://rm/svn/creatf>
repository /data/svn/repositories/creatf created
it's ok
but the same operation through crontab failed:
#cat /etc/crontab
*/5 * * * * root /usr/local/bin/ruby /usr/local/www/redmine/extra/svn/reposman.rb -r rm -s /data/svn/repositories -o
www -u <http://rm/svn/> -v >> /var/log/reposman.log

#tail -f /var/log/reposman.log

querying Redmine for projects...
retrieved 1 projects
treating project redmine
unable to create /data/svn/repositories/creatf : "svnadmin create /data/svn/repositories/creatf" failed

History

#1 - 2009-07-02 20:29 - Jean-Philippe Lang

Maybe you could try to see why svnadmin fails on your system when running with cron.

#2 - 2009-12-26 13:18 - Jean-Philippe Lang

- Status changed from New to Closed

- Resolution set to No feedback

#3 - 2010-01-18 17:23 - Joachim Fritschi

You have to append the option:

```
--command='/usr/local/bin/svnadmin create'
```

FreeBSD has installed all ports in /usr/local. Crontab only has PATH=/etc:/bin:/sbin:/usr/bin:/usr/sbin set. This means reposman won't find the svnadmin binary unless you extend your PATH or add the custom path.
