Target version:			
Resolution:			

Description

I created a custom field in the activities that should contain different code for each activity. Also the codes could be different in the different projects. This is supported from Redmine and works fine.

+ Overview Activity Roadmap Issues Spent time Gantt Calendar News Documents Wiki Forums Files Repository Settings

Settings

ProjectMembersIssue trackingVersionsIssue categoriesRepositoriesForumsTime tracking

Name	System Activity	Operation Number	Active
Design		0000	<input checked="" type="checkbox"/>
Development		0000	<input checked="" type="checkbox"/>
Test		1000	<input checked="" type="checkbox"/>
Service		0000	<input checked="" type="checkbox"/>

I tried to access this data from outside (using Python-Redmin library) and it seems to be impossible. The developers of the library said that this is not supported from the Redmine API and they cannot solve this problem. I will appreciate extension of the Redmine API that will allow access to custom fields in the activities.
