Redmine - Patch #35674

Several improvements (with fixes of inconsistencies) for the issues show view

2021-08-03 04:33 - Mischa The Evil

Description

I'll leave an untested WIP-patch against current trunk.

Change descriptions by file:

- *app/views/issues/show.html.erb*
  - blank (unset) value rendering of issue core attributes (currently a dash [-] is rendered for several attributes, while nothing is rendered for other attributes):
    - consistently render a dash for issue core attributes with a blank (unset) value
  - spent time rendering (currently the field is not rendered when there's no spent time on the issue):
    - consistently show the field and render a dash when there's no spent time on the issue (if spent time module is disabled the field and dash won't be rendered)
  - blank description rendering (currently the field is not rendered when it has a blank [unset] value):
    - consistently show the field and render a dash for blank description attribute (partly the same as #24015)
  - full-width custom field rendering (the field is rendered below the attachments section):
    - render the field above the attachments section (and below the description core attribute)

- *app/helpers/issues_helper.rb*
  - blank (unset) value rendering of issue core attributes for related issues and subtasks sections (currently nothing is rendered):
    - consistently render a dash for issue core attributes with a blank (unset) value for related issues and subtasks sections
  - estimated time rendering (currently the field value always shows the 'Total:' label):
    - consistently show the field and render a dash when there's no estimated time on the issue, and only show the 'Total:' label with value when it is appropriate
  - blank (unset) value rendering of half-width issue custom field attributes (currently nothing is rendered for custom field attributes):
    - consistently render a dash for half-width issue custom field attributes with a blank (unset) value
  - full-width custom field rendering (currently the field is not rendered when it has a blank [unset] value):
    - consistently render a dash for full-width issue custom field attributes with a blank (unset) value

Some notes and warnings on the patch:

- contains no tests, doesn't modify existing tests and might break existing tests
- doesn't modify email templates and/or API views

I'd like to get some feedback on the mentioned changes before I spend more time on this patch.

In the light of advancing insight, I now think that this should not be implemented.
