

Redmine - Feature #35749

Call Redmine::Hook.call_hook(:model_changeset_scan_commit_for_issue_ids_pre_issue_update) not only in case of a fixed issue with 'fixes' keyword

Description			
In			
app/models/changeset.rb			
there is a hook <code>:model_changeset_scan_commit_for_issue_ids_pre_issue_update</code> which is called only if an issue was marked as fixed ('fixes' keyword) within a commit message.			
So, there is no possibility to run an own adapter or do other things when an issue just changed within a commit message with 'refs' keyword.			
Moving the lines			
<pre>Redmine::Hook.call_hook(:model_changeset_scan_commit_for_issue_ids_pre_issue_update, { :changeset => self, :issue => issue, :action => action })</pre>			
in the			
<pre>def fix_issue(issue, action)</pre>			
function after the <code>fix_issue()</code> and <code>log_time()</code> call			
<pre> unless repository.created_on && committed_on && committed_on < repository.created_on fix_issue(issue, action) if fix_keywords.include?(action) log_time(issue, hours) if hours && Setting.commit_logtime_enabled? Redmine::Hook.call_hook(:model_changeset_scan_commit_for_issue_ids_pre_issue_update, { :changeset => self, :issue => issue, :action => action }) end</pre>			
will invoke the <code>:model_changeset_scan_commit_for_issue_ids_pre_issue_update</code> hook also if there was just the 'refs' keyword used.			
Well, is there a reason to call this hook only in case an issue was changed to 'fixed'?
