

Redmine - Defect #3578

Subversion fetch_changesets does not handle moved (root-)directories

2009-07-01 21:04 - Oskar Nordquist

Status:	New	Start date:	2009-07-01
Priority:	High	Due date:	
Assignee:	Jean-Philippe Lang	% Done:	0%
Category:	SCM	Estimated time:	0.00 hour
Target version:		Affected version:	
Resolution:			
Description			
<p>I had a standard layout (trunk/branches/tags). I created a new directory called A and moved trunk/branches/tags into A. Then I deleted my SCM in the project and created a new one pointing to A.</p> <p>This caused all my activity to disappear since the only changesets fetched was the creation of directory A and the move of trunk/branches/tags into A. All other changesets are lost.</p>			

History
