

Redmine - Feature #35815

Specifying the size of the preview image in the text

Description
User history

In Jira, it is possible to insert an image in the body of a comment (or wiki) in a reduced size. If you need to increase it, then you need to click and it will become large in lightbox.

- This is very convenient when the description is very large (for example, a wiki). It is inconvenient to return to the attachments.
- The size of the images can be very large. For example, I can take a screenshot from 2 monitors (they record the place, time, changes).

I tried this plugin. It does as it should in attachments, and it is also necessary in the comments.

History

#1 - 2021-08-25 17:38 - Igor M

- Copied from Feature #12404: User can view limited attached docs as per the defined duration by administartor. added

#2 - 2021-08-25 17:39 - Igor M

Sorry, delete the linked task

#3 - 2021-08-25 17:57 - Igor M

- Status changed from New to Resolved

<https://www.redmine.org/projects/redmine/wiki/RedmineTextFormattingTextile#Macros> - I finally found a solution!!!

#4 - 2021-08-25 19:20 - Mischa The Evil

- Copied from deleted (Feature #12404: User can view limited attached docs as per the defined duration by administartor.)

#5 - 2021-08-25 19:30 - Mischa The Evil

- Status changed from Resolved to Closed

- Resolution set to Invalid

Thanks for the feedback. I'll close this issue as requested because the functionality is provided by the thumbnail macro as stated by Igor.

#6 - 2021-08-26 09:55 - Igor M

It would be good, if this was the default function.
I have been looking for a very long time how to use it.

This plugin https://www.redmine.org/plugins/redmine_lightbox2 did not give a full implementation. But you can finish this https://www.redmine.org/plugins/clipboard_image_paste or similar.

Thank you all!

FWIW: several of the features of these plugins, besides the thumbnail macro feature, are already integrated into the Redmine core by now:

- Image files can be dragged onto the text area in order to be uploaded and embedded (introduced via [#3957](#) in Redmine [2.3.0](#));
- Markup is automatically generated for uploaded images dropped into wiki-edit textarea (introduced via [#26071](#) in Redmine [3.4.0](#));
- Images in your computer's clipboard can be pasted directly using Ctrl-v or Command-v (introduced via [#3816](#) in Redmine [4.1.0](#)).
