This seems to be related to <https://github.com/gjtorikian/commonmarker/pull/148> which updated cmark-gfm to [0.29.0.gfm.2](https://github.com/gjtorikian/commonmarker/pull/148). There, they did in fact changed the footnote handling.

- The format change of the footnote IDs was committed in <https://github.com/gjtorikian/commonmarker/pull/148>
- The missing id for the back references however looks strange... Maybe we have to do something different here?

How about to change the test code side by regexp match as a workaround ?

Attached patch supports both CommonMarker "`== 0.23.2`" and "`<= 0.23.1`" tests.

I have locked commonmarker to 0.23.1 until we find a better way to handle the footnotes because the new format doesn't affect only the tests, it affects also the logic from sanitization_filter ([source:trunk/lib/redmine/wiki_formatting/common_mark/sanitization_filter.rb#L70](https://github.com/gjtorikian/commonmarker/blob/0.23.1/lib/redmine/wiki_formatting/common_mark/sanitization_filter.rb#L70)) and we need to support both ways depending on the Ruby version.
