This seems to be related to https://github.com/gjtorikian/commonmarker/pull/148 which updated cmark-gfm to 0.29.0.gfm.2. There, they did in fact changed the footnote handling.

- The format change of the footnote IDs was comitted in https://github.com/github/cmark-gfm/pull/230
- The missing id for the back references however looks strange... Maybe we have to do something different here?

How about to change the test code side by regexp match as a workaround ?
Attached patch supports both CommonMarker "== 0.23.2" and "<= 0.23.1" tests.

I have locked commonmarker to 0.23.1 until we find a better way to handle the footnotes because the new format doesn't affect only the tests, it affects also the logic from sanitization_filter (source:trunk/lib/redmine/wiki_formatting/common_mark/sanitization_filter.rb#L70) and we need to support both ways depending on the Ruby version.
