Redmine - Defect #35917

Bringing redmine projects back from a restored hard drive

2021-09-24 14:00 - suat kayabaşı

application 3.2.0. It was a minimal debian linux version with all the modules needed, Unfortunately the drive of my computer, which was holding this server, has been dam the files from it. My problem is: how to move every kept there data to the fresh instan with all the attachments held by created issues. But I don't see any way to make mys just simply follow the usual guide for restoring Redmine :(I set up a new virtual machine with Redmine and tried to copy entire mysql folder - It anymore. I reinstalled the bitnami image and this time I copied only data folder (from mysql dire the old drive - It failed in the same way I tried to copy only bitnami_redmine folder (I minded to copy the ibdata files too) - sam

I was using a bitnami redmine virtual machine (https://bitnami.com/stack/redmine/virtapplication 3.2.0. It was a minimal debian linux version with all the modules needed, Unfortunately the drive of my computer, which was holding this server, has been dant the files from it. My problem is: how to move every kept there data to the fresh instan with all the attachments held by created issues. But I don't see any way to make mys just simply follow the usual guide for restoring Redmine :(I set up a new virtual machine with Redmine and tried to copy entire mysql folder - It anymore. I reinstalled the bitnami image and this time I copied only data folder (from mysql dire the old drive - It failed in the same way I tried to copy only bitnami_redmine folder (I minded to copy the ibdata files too) - same	Description	
I was using a bitnami redmine virtual machine (<u>https://bitnami.com/stack/redmine/virtual-machine</u>) as a server for Redmine application 3.2.0. It was a minimal debian linux version with all the modules needed, working flawlessly since year 2014. Unfortunately the drive of my computer, which was holding this server, has been damaged. Some IT company managed to restore all the files from it. My problem is: how to move every kept there data to the fresh instance of Redmine. I am able to copy files directory with all the attachments held by created issues. But I don't see any way to make mysqldump right now (MySQL Server 5.5), so I can't just simply follow the usual guide for restoring Redmine :(I set up a new virtual machine with Redmine and tried to copy entire mysql folder - It failed in a way I can't start mysql service anymore. I reinstalled the bitnami image and this time I copied only data folder (from mysql directory), which should bring every database from
