Description			
Hi there,			
I wrote a plugin which extends original import features with following:			
<ul style="list-style-type: none">• ODX aware, means you do not need to convert the importing data to CSV<ul style="list-style-type: none">◦ this feature uses roo gem• pre-auto-mapping and pre-validation on mapping page, to avoid being dropped importing records• mapping is not data columns to internal entity one, but entity one to data one• project members import			
If this UX is built in to original Redmine, I'm happy!			

History

#1 - 2021-10-15 02:15 - Anonymous

Developed for Redmine 4.1.

#2 - 2021-10-27 03:37 - Anonymous

- File *ss_import.zip* added

attached is the improved version of *ss_import* plugin.

The auto-mapping used to be sticky and was not possible to change manually, but now it is changeable.

#3 - 2021-11-01 03:02 - Anonymous

- File *ss_import.zip* added

Despite of my intention, related issues were not possible to import because of a regular expression bug. Attached is the resolved version.

#4 - 2021-11-10 06:54 - Anonymous

- File *ss_import.zip* added

Former 3 zip files were old branch's working copies and will not work as I explained.

The file this time is the correct one.
