Description

When i hosted redMine to my remote server, all is fine but when I'm trying to run redMine on my local machine, the login form is not behaving as it should: in fact when substituting the form opening way from:

<%= form_tag({:action => "login"}, :class => "tabular")%>

to

<% form_tag({:action=> "login"}, :class => "tabular") do %>

it was shown correctly.

Maybe it's caused by the rails version, I'm running with:

Ruby 1.8.5-21
Rails to 1.1.6

History

I assume you're running at least redMine 0.4.2
In doc/INSTALL, you'll see:

== Requirements

  • Ruby on Rails 1.2.2

So... upgrade Rails and it should work without hacking the code
:-)

#2 - 2007-04-06 16:19 - Mahmoud M'HIRI

Thanks :)

In fact, I'm so careful when updating rails because i won't
use a recent version then used in my remote server.

And about what is said in doc/INSTALL, i think that it
should be mentioned in the redMine's homepage (installation
page).

anyway! i updated to 1.2.3 and all is fine!

#3 - 2007-04-06 16:44 - Jean-Philippe Lang

Rails 1.2.2 requirement **is** mentioned here:

http://www.redmine.org/index.php?s=install
