Description I am a blind Linux user and I installed GSB. Now when I start the Orca screenreader, I notice there are a couple of utilites missing. The first utility that is no longer in Orca is speech-dispatcher. The second is Espeak. Also, when I start Orca, and go to "preferences" and check the speech page, I noticed two areas are grayed out. One is the "speech synthesizer", which is where Espeak would go. The second is "speech system" where speech-dispatcher would go. Without these two things, Orca is unusable. The best solution from a blind person's perspective would be to have these two things already installed. That way, when a blind person hits Alt+F2 and types Orca in the run box, the Orca screen reader will start and begin to speak, and then a blind person can configure the system the rest of the way.

Sorry, but you in wrong place to ask. This is Redmine bug tracker but not Orca. Maybe should try on <http://bugzilla.gnome.org/buglist.cgi?query=product%3Aorca+>
