Description

Hello
I'm working on Redmine 4.x, I d'ont know the X as I'm not the administrator but I would to retrieve tags values associated with an issue via the REST API. I have found no way to retrieve these tags via API and no documentation that could let me think that there is such information in a more recent version of redmine/plugin tag
I know that to retrive comments on an issue I have to add include=journals but I did'nt find any equivalent for tags

I think the "tags" are a feature of third-party plugins, but Redmine's API does not handle data added by third-party plugins.

I recommend you ask the author of the plugin.
