Description

Hello,
I need to see an Issue with all its descendants.

Until now the nearest solution I found is filtering by:

"Parent task" "contains" "<root-issue-id>"

However this does not displays (by design) the parent task itself.

Anyone knows a way to reach this goal?

Thank you.

History

#1 - 2021-12-20 18:55 - Andrea Valle

- File parent-child-filter-inclusive.patch added

I arranged a patch for accomplishing this task.

I added 2 operators to operators_by_filter_type for ":tree" filter type.

- is (inclusive)
- contains (inclusive)

These operators are managed both for "Parent task" filter and "Subtasks" filter.

This path has been developed on redmine tag: 4.2.3

Hope this help.
