Redmine - Defect #36389
Filter parameters of Query string do not work when default query is enabled
2022-01-06 03:27 - Yuichi HARADA

Description

Normally, clicking trackers or numbers in the issues tracking in the project's overview will display the issues list filtered by these conditions.

If the default query is enabled, these filters will be ignored and the default query will be applied to display the issues list.

Only check for set_filter param when retrieving the default query (#7360, 35795, #36389).

History

#1 - 2022-01-06 04:06 - Yuichi HARADA

It seems that you should add without_default referenced by ProjectsController#retrieve_default_query
(source:/trunk/app/controllers/projects_controller.rb#L333) and IssuesController#retrieve_default_query
(source:/trunk/app/controllers/issues_controller.rb#L489) to the query string.

```ruby
def retrieve_default_query(use_session)
  return if params[:query_id].present?
  return if api_request?
  return if params[:set_filter] && (params.key?(:op) || params.key?(:f))
  if params[:without_default].present?
    params[:set_filter] = 1
  end
end
```

Maybe you need to fix the following:

```bash
% grep -rm "set_filter" * --exclude-dir={vendor,public,tmp,doc,log,test,config/locales,files,coverage,spec,node_modules}
app/models/mailer.rb:567:                                :set_filter => 1, :assigned_to_id => 'me',
app/models/mailer.rb:570:      :set_filter => 1, :sort => 'due_date:asc',
app/models/query.rb:463:      params[:set_filter] = 1
app/controllers/issues_controller.rb:487:    return if params[:set_filter] && (params.key?(:op) || params.key?(:f))
app/controllers/issues_controller.rb:490:      params[:set_filter] = 1
app/controllers/issues_controller.rb:493:    if !params[:set_filter] && use_session && session[:issue_query]
app/controllers/queries_controller.rb:87:    redirect_to_items(:set_filter => 1)
```

2022-03-26 1/3
Maybe it is enough to relax the set_filter if to not include the second condition (op and f params)?

I think that it works properly if only set_filter is judged without the second condition. And I don't think the without_default parameter is needed.

Related to deleted (Feature #7999: Issue Custom Query: Default Query)

Related to Feature #7360: Issue custom query: default query per instance, project and user added

Related to Feature #35795: Settings for global and user default custom ProjectQuery added

Assignee set to Marius BALTEANU
Target version set to 5.0.0

If we change as I proposed, then the without_default param doesn't make any sense anymore.

I'll wait for some more feedback before I commit this.
