Description

Use Case:
I want my users to change Issue statuses freely, but when a user marks Issue as "Done", I want them to write obligatory note in the "Notes" section.

Desired solution:
The best way to achieve it, is to set "Notes" as "Required" field in "Workflow->Fields permissions" tab. Unfortunately it is not possible now.

Workaround:
I know that I could create custom field, but this is not the case, because I explicitly want to use "Notes" mechanism.

Feature request:
Could you please add "Notes" to "Workflow->Fields permissions" tab?
There are plenty of System fields uder the "Workflow->Fields permissions" tab already, so I see no reason why "Notes" field can't be there.

Kind regards,
