| Status: | Needs feedback | Start date: | 2009-07-24 |
| Priority: | Normal | Due date: | |
| Assignee: | | % Done: | 0% |
| Category: | SCM | Estimated time: | 0.00 hour |
| Target version: | | Affected version: | 0.8.4 |
| Resolution: | | | |
| Description In certain cases (see http://svn.haxx.se/dev/archive-2005-08/0309.shtml) a subversion respository might not send an author nor date xml elements as part of a logentry. In such situations redmine (0.8.4) fails to read any revision below the failing one.. After a bit of debugging.. I made the following modifications to lib/redmine/scm/adapters/subversion_adapter.rb, in order to make this work: <pre>date = logentry.elements['date'] msg = logentry.elements['msg'] revisions << Revision.new({:identifier => logentry.attributes['revision'], :author => (logentry.elements['author'] ? logentry.elements['author']].text : ""), :time => date ? Time.parse(date.text).localtime : nil, :message => msg ? logentry.elements['msg'].text : "", :paths => paths }))</pre> | | | |

- Status changed from New to Needs feedback

Any news on this issue?
Is anyone able to reproduce this with current trunk?

Best regards,
Daniel
