**Description**

The normal download location for releases <https://www.redmine.org/releases/> does not have the files for the two new releases for this week. Instead, they appear to have been attached to the [Download](#) wiki page.

This breaks our automated download in our Dockerfile. Any chance the files can be uploaded to the normal location.

### History

#### #1 - 2022-02-25 00:31 - Go MAEDA

As described in [the news](#), tarballs have not been uploaded to <https://www.redmine.org/releases/> yet due to a technical issue. The tarballs will be uploaded to the usual location as soon as the problem is resolved. Sorry for the inconvenience.

Don't worry! I will let you know once we upload the tar balls in the normal location.
