Adding the following CSS seems to fix it.

```
#quick-search form { display: inline-block; }
```

#3 - 2022-04-14 15:26 - Go MAEDA

- Target version set to *4.2.6*

Setting the target version to 4.2.6.

This fix is not sufficient, as it results in the dropdown item moving 1 pixel upwards after a click.

The attached change looks good to me so far with redmine 5.0.0 on Safari 15.4, Firefox 99.0.1, Chromium 100.0.4896.127.

The patch was not tested by me or other Redmine maintainer and it was more important to release the new versions because of the security issues. We will do our best to include the fixes in [4.2.7](#).
