<b>Resolution:</b>			
<b>Description</b>			
<p>Last few days i had a problem with mail notifications, in fact, mails are logged as sent in production.log but i didn't receive any mail in my box when i add a document/file (i checked all in the settings)..</p> <p>So i had a doubt about my smtp configuration but when i tested the lost_password feature, an email was sent to me.</p> <p>So i think that tests in controllers (documents_controller.rb, issues_controller.rb,..) before calling the model Mailer.rb should be revised unless that's working for you..</p>			

### History

#### #1 - 2007-04-06 18:20 - Jean-Philippe Lang

It works indeed.  
Make sure that the account you're using is a member of the project.  
Only project members receive mail notifications.  
For example, if you add a file with an admin account that is not a member of the project, you won't receive the notification.  
You can check the "To" field of the mail in the log.
