Target version:		Affected version:	4.2.7
Resolution:			
Description			
<p>Hi</p> <p>There is a function retrieve_previous_and_next_issue_ids in issues_controller show action that is too heavy when you have many issues.</p> <p>In my test, getting an specific issue by API takes about 2 seconds, but exactly the same issue in web browser takes about 10 seconds. after commenting retrieve_previous_and_next_issue_ids, web browser also responses quikely.</p> <p>1. Which are the usages of these function except showing prev/next link in issue view page?</p> <p>2. Is is suitable to have an option to ignore this.</p> <p>3. Is it possible to make this function more efficient?</p>
