Description	
<p>I need to set a custom email sender per project. There used to be plugins for very old redmine versions, but these don't work with current versions any more:</p> <p>https://github.com/Warecorp/redmine_project_specific_email_sender https://github.com/eashman/redmine_author_notification_emails</p> <p>My current solution is to add a custom mail_from field to projects and patch app/models/mailer.rb like this:</p> <pre>678a679,686 > # CE: project specific mail from address > if @issue > new_mail = @issue.project.custom_field_values[0].value > if !new_mail.nil? > headers.merge!('From' => new_mail) > end > end > end ></pre> <p>I'm wondering if something like this could be add to redmine.</p>
