

Redmine - Defect #37585

Do not show "History" tab for content in Filesystem repository

2022-08-19 03:16 - Go MAEDA

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:	Go MAEDA	% Done:	0%
Category:	SCM	Estimated time:	0.00 hour
Target version:	5.0.3	Affected version:	
Resolution:	Fixed		
Description			
Although Filesystem repository (#1393) does not support revisions, "History" tab is shown for content in a Filesystem repository. Another tab, "Annotate", which is not available in a Filesystem repository, is hidden. "History" tab should also be hidden.

Revision 21800 - 2022-09-07 07:47 - Go MAEDA

Don't show "History" tab for content in Filesystem repository (#37585).

Patch by Go MAEDA.

Revision 21802 - 2022-09-09 08:54 - Go MAEDA

Merged r21800 from trunk to 5.0-stable (#37585).

History

I agree. I think this can be solved by adding:

- a `Repository#supports_history?` method that would return 'true';
- a `Repository::Filesystem#supports_history?` method that would return 'false';
- a condition (if `@repository.supports_history?`) in [source/app/views/repositories/_link_to_functions.html.erb@21772#L11](#) for the rendering of the history tab.

What do you think?

Can we use the existing `Repository#supports_all_revisions?` instead of adding a new method?

I've taken a closer look at `Repository#supports_all_revisions?` and I think we can indeed. However, I think that the name of that method combined with what it's used for, can be quite confusing (which is also what led me to my previous proposal). I'll elaborate.

`Repository#supports_all_revisions?` was introduced in [r5143](#) in support of [r5145](#), as such was its original purpose to use it to make a distinction for rendering either the "view all revisions" or the "view revisions" link.

Following its introduction Etienne opened [#7984](#), for which several changes were applied. And, while that issue remains open until today, I think it is actually solved with the commits that are related to the issue, but left open because of the additional (IMHO out-of-scope) matters that came up with it (see [#7984#note-22](#) and [#7984#note-23](#)).

Nowadays `Repository#supports_all_revisions?` is additionally used for:

- the statistics link condition;
- the revision text field tag condition;
- the atom links condition.

Given the above, we now already have four uses for the method and with the proposal for this issue, it'll make five.

The problem with this isn't the usage itself. Instead, I think it's the name of the method which can be confusing in itself and as such be problematic.

TL;DR: I think that `Repository#supports_all_revisions?` can be used as-is for a new condition to hide the history tab in a 5.0.x maintenance release. For 5.1.x (or 6.x) though, I'd say it might be more accurate to rename the method to `Repository#supports_history?`.

What do you think?

#4 - 2022-09-03 17:02 - Go MAEDA

- *File 37585.patch added*

- *Target version set to Candidate for next minor release*

For 5.1.x (or 6.x) though, I'd say it might be more accurate to rename the method to `Repository#supports_history?`.

I agree, naming is important. I will commit the attached patch for 5.0.3. After that, I will open a new issue that suggests changing the name of the method from `supports_all_revisions?` to `supports_history?`.

#5 - 2022-09-05 14:59 - Go MAEDA

- *Target version changed from Candidate for next minor release to 5.0.3*

Setting the target version to 5.0.3.

#6 - 2022-09-07 07:47 - Go MAEDA

- *Status changed from New to Resolved*

- *Assignee set to Go MAEDA*

- *Resolution set to Fixed*

Committed the patch.
