Target version:	Affected version:
Resolution: Duplicate	

Description

Hello,

Microsoft is going to disable IMAP authentication to read emails from Office365. I need to use modern authentication to read/receive emails.
Currently, I am using IMAP to receive email into Redmine.

```
[root@redmine-01 config]# rake redmine:email:receive_imap RAILS_ENV="production" host=outlook.office365.com port=993
username=redmine@ipc.org password=Luk92898 unknown_user=accept unknown_user=create --trace ssl=true
unknown_user=accept no-permission-check=1
Your Gemfile lists the gem redmine_crm (>= 0) more than once.
You should probably keep only one of them.
Remove any duplicate entries and specify the gem only once.
While it's not a problem now, it could cause errors if you change the version of one of them later.
(in /var/www/redmine-4.2.2)
```

- Invoke redmine:email:receive_imap (first_time)
- Invoke environment (first_time)
- Execute environment
- Execute redmine:email:receive_imap

```
rake aborted!
Net::IMAP::NoResponseError: LOGIN failed.
