

Redmine - Feature #3773

Issue filtering should produce a bookmarkable URL ?

Target version:			
Resolution:	Invalid		
Description			
Hi,			
I'd like to see the URL that is produced when applying filters as something that I can bookmark / send to other developers etc.			
Specifically I'd like to be able to bookmark Features vs. Bugs easily.

- Status changed from New to Closed
- Resolution set to Invalid

Save your filter as a public custom query and it will get a unique url. For example on here the following url is a list of issues for Translation:
http://www.redmine.org/projects/redmine/issues?query_id=7
