After Rails was updated to 7.1 in [r22488](#), RepositoriesController#diff always fails with the following error. The error is due to the change made by [r21883](#).

Missing template, responding with 404: Missing template layouts/base.html.erb with {:locale=>[:en], :formats=>[:html], :variants=>[], :handlers=>[:raw, :erb, :html, :builder, :ruby, :rsb]}.

Although [r21883](#) was necessary to fix the problem that the layout is not applied for the diff of .js files ([#37626](#)), I think the change should be reverted at this point. Currently, the diff feature is not available for all file types, but if [r21883](#) is reverted, diff will be available for all but a few file extensions.

I think we should revert [r21883](#) and then figure out how to solve the issue reported in [#37626](#).

I totally agree, reverted [r21883](#). I'm removing this from [6.0.0](#), is part of [#36320](#).
