Description

Hi Jean-Phillipe

I am evalutating redMine and retrospectiva.
What I like very much, is the localization, a seemless integration of multilanguage support! Bravo!

What I miss, something like the Extension Connector in retrospectiva, it would be very nice, to have some similar features.

One thing that makes OS Project widespread is when there exists a connector for other extensions, so that people like us can hook in, and write some nice stuff as plugin in redMine. Therefor an API and also hooks are very useful.

You care for the Core and people can integrate hot features and send it to a redmine repository.

What do you think

kind regards

Rafael

Hi Jean-Phillipe,

i vote for this feature also.
that is exactly what we talk about to weeks ago. currently i'm
short before first release of my continuous integration 'extension'
for redmine and now i need some kind of connector/plugin-concept
to merge the two worlds together.

if you are out of spare time, just drop me a mail. i try to do
then a first/simple draft for an 'extension connector'
implementation.

bye
ralph

Plugins support would be great indeed.

#3 - 2007-09-23 14:52 - Jean-Philippe Lang

Basic plugin support is added in r752 & r753.
A sample plugin can be found in /extra

#4 - 2007-10-15 16:08 - Jean-Philippe Lang

You can find a first plugin (simple_ci) in the repository.
You can fill other requests for additional features about plugins.
