<b>Resolution:</b>	

**Description**

I really appreciate it that the issue [#1406](#) has implemented. However, I found the following bug.

When we access the page of file changing view by such URL,

```
http://example.com/projects/example/repository/revisions/master/changes/src/test.c
```

we use dropbox to view another branch by such wrong URL like

```
http://example.com/projects/example/repository/changes/src%2Ftest.c?rev=experimental
```

It is because that true address is the following.

```
http://example.com/projects/example/repository/revisions/experimental/changes/src/test.c
```

My environment is

```
$ ruby script/about
About your application's environment
Ruby version      1.8.7 (x86_64-linux)
RubyGems version  1.3.1
Rails version     2.2.2
Active Record version 2.2.2
Action Pack version 2.2.2
Active Resource version 2.2.2
Action Mailer version 2.2.2
Active Support version 2.2.2
Application root  /home/server/redmine
Environment       development
Database adapter  mysql
Database schema version 20090614091200
```

Warmest Regards.

#### History

Thanks for reporting this, I will try to reproduce the problem and provide a fix sometime in the next few days.

##### #2 - 2009-08-28 22:25 - Adam Soltys

A possibly relevant discussion from #redmine on irc.freenode.net:

```
<jg> rchady: any clue why I'd get a message like: "The entry or revision was not found in the repository." while browsing a repository?
<rchady> it isn't able to browse the repo
<rchady> So, either wrong userid/passwd
<rchady> or unable to contact it
```

<rchady> if your repo is being accessed by HTTPS, make sure the certificate is accepted the first time  
<jg> rchady: ok, here's the issue: I followed the directions in: <http://www.redmine.org/wiki/redmine/RedmineRepositories> where it says I need to create a bare repository. I did that. Then I could see revisions, but when browsing into them, was got that message. Now that I've also created the non-bare repository, things seem to work...  
<jg> so the directions are somehow incorrect, it seems....  
<adam[pac]> jg: I always use bare repositories. Can you paste the error you get when you use a bare repo?  
<jg> adam[pac]: "The entry or revision was not found in the repository."  
<jg> when going to view the diff or the files themselves....  
<adam[pac]> jg: Can you paste an example URL that you're at when you get the error?  
<jg> adam[pac]: <http://redmine.gettysfamily.org/repositories/entry/test/os/utils.c?rev=2a806d7fa372e28d039761c9b4087cf812e8e46b>

### **#3 - 2009-08-29 02:43 - hayashibe yuta**

Though I usually use HTTPS access, It's no problem that I browse the repository.  
I tried accessing by HTTP, but this issue happened.

### **#4 - 2013-02-06 09:33 - Daniel Felix**

- *Subject changed from Dropbox does not work when use it viewing fiel changes (Git) to Dropbox does not work when use it viewing file changes (Git)*
- *Status changed from New to Needs feedback*

Any news on this issue? Can someone confirm this defect anymore?

### **#5 - 2013-02-09 08:42 - Toshi MARUYAMA**

- *Status changed from Needs feedback to Closed*

SCM routing is replaced in porting to Rails3.  
So, this issue is obsolete.
