<b>Target version:</b>	
<b>Description</b>	
<p>I just wrote the simple template engine: You must create a project with id "templates". Next, when you'll create the new wiki page, if page with such name can be found in templates/wiki, it will be used as template.</p> <p>I using it to write SLA for projects.</p> <p>The changes is in the lib/redmine/wiki_formatting/textile/helper.rb (one function)</p> <pre>def initial_page_content(page)   @wtempl = Project.find("templates")   pname = "#{@page.pretty_title}"   @templ = @wtempl.wiki.find_or_new_page(pname)   if @templ.new_record?     then       "h1. #{@page.pretty_title}"     else       @templ.content.text     end   end end</pre>

### History

#### #1 - 2018-01-16 13:01 - Sergey Gribnyak

Is this worked for redmine 3.3.2.stable ?

#### #2 - 2018-01-16 16:12 - Toshi MARUYAMA

- Description updated

#### #3 - 2018-01-16 16:46 - Sergey Gribnyak

As I can view: no.

- I changed the lib/redmine/wiki\_formatting/textile/helper.rb;
- create templates/wiki/MyTest page;
- restart redmine;

New wiki pages with "MyTest" name does not contain relevant content. What do I need to do to make this solution work?
