**Description**

**Note**: I'm not sure if this is possible with SCMs other than Subversion 'cos I don't really have much experience with other SCMs.

While browsing the repository, it'd be nice if I can get a direct link to the file in question from the Repository page.

For e.g., assume my SVN repo is at http://svn.me.com/myproject/trunk/

When, browsing the repo, the entry "/src" would have a link on its line that links directly to http://svn.me.com/myproject/trunk/src/.

As it is, when I spot something I want to checkout, I need to figure out the path to the repo and there's nowhere for me to copy and paste the root path of the repo either if I don't have admin access.
