Hi, guys,

I create one new project by copy from project template, all tickets were also copied and created from the template project. How can i fix this issues?

- Status changed from New to Closed

- Resolution set to Invalid

Please use [the forum](#) to ask about Redmine usage. The issue tracker is used for development and to track bugs or the development of new well-defined features.

In any case, when copying a project, you can select which object types you want to copy. If you deselect **issues** there, the existing issues will not be copied to the new project.
