Description

I am writing a Redmine plugin to use the wiki module as a content source for other pages. It needs is a way to tell textilizable to format links in specific ways. Current options for :wiki_links are :local, :anchor and the default wiki links.

I propose to allow a custom Proc in :wiki_link with this simple patch:

```
--- app/helpers/application_helper.rb    (revision 2859)
+++ app/helpers/application_helper.rb    (working copy)
@@ -370,6 +370,9 @@
     when :anchor
       # used for single-file wiki export
       format_wiki_link = Proc.new {|project, title, anchor| "###{title}" }
+   when Proc
+     # custom proc
+     format_wiki_link = options[:wiki_links]
     else
       format_wiki_link = Proc.new {|project, title, anchor| url_for(:only_path => only_path, :con
troller => 'wiki', :action => 'index', :id => project, :page => title, :anchor => anchor) }
     end
```
