Description			
<p>Currently, the search engine does not support multiple multi-word phrases.</p> <p>For example, we cannot search objects that contain two phrases "closed issue" and "closed version". If you give a search string "closed issue" "closed version", the search engine search for objects containing three strings "closed issue", "closed", and "version". This is due to the behavior of Redmine::Search::Tokenizer#tokens.</p> <pre>Redmine::Search::Tokenizer.new(%q "closed issue" "closed version").tokens => ["closed issue", "closed", "version"]</pre> <p>If the Tokenizer returns two tokens, "closed issue" and "closed version" for the same input, it will be possible to search for multiple multi-word phrases.</p>
