Target version:				

Description
It's needed sometimes to remove some watchers in bulk edit. This patch added this feature, but does not contains related tests!

The bulk edit context menu now includes an option to remove multiple watchers simultaneously. This feature enables users to easily manage their watched items by selecting multiple entries and removing the watchers associated with them in one action. By simplifying the process, users can save time and effort when organizing their watched items. This enhancement improves the user experience by providing a convenient and efficient way to modify watcher settings in bulk. I hope the information helps you.

Thanks. My patch adds ability to remove other users from watchers. Not only my watched issues.
