Target version:		Affected version:	3.2.0
Resolution:	Invalid		
Description			
Redmine V3.2			
Problem: The site needs to be certified to show it as a secure site on the WEB (SSL). The emails are not going out either			
Has anyone of you been able to do it? help me with the steps. We tried but we couldn't.			

History

- Status changed from New to Closed
- Resolution set to Invalid

Redmine 3.2 is very old and has several known security issues. It is not supported by the Redmine project anymore. Pleas upgrade to a newer version (at least [4.2.10](#)). Also, this issue tracker is used to discuss new features and code issues. Questions about using and configuring Redmine can be asked in the forums.
