

Redmine - Patch #38820

Retry in case of stale issue during Issue.update_versions

2023-07-06 16:20 - Jens Krämer

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:	Go MAEDA	% Done:	0%
Category:	Issues	Estimated time:	0.00 hour
Target version:	5.1.0		
Description			
<p>This is quite the corner case but we had this issue occur with one client at Planio:</p> <p>With Setting.parent_issue_priority == 'derived', while setting a projects' parent project to nil, several issues that belonged to now inaccessible versions were updated in Issue.update_versions. In one case, this led to a situation where an issues' parent issue priority was updated, before that parent issue was being processed in the loop in Issue.update_versions. The attempt to then set the parent issues' version to nil later failed with a StaleObjectError due to the previous save from Issue#update_parent_attributes.</p> <p>The attached patch against current master fixes that by catching the error and retrying once with a reloaded version of the issue. It also contains a test case that reproduces the issue (with MySQL, at least - the bug only shows when the child issue is processed before the parent in update_versions, so it depends on the order in which issues are fetched there)</p>
