<b>Description</b>	
<p>I'm looking for a way for a multidimensional array to be able to capture the following scheme:</p> <p>Custom field: model (wood screw, diameter 4mm) Definition 1: model type (length) Value 1: value (order quantity)</p> <p>Of course, it would be even better if the definitions were variable and you could create even more dimensions:</p> <p>Custom Field: Model (Wood Screw) Definition 1: model type 1(length) Definition 2: Model type 2 (diameter) Value 1: value (order quantity)</p>
