

Redmine - Defect #39

Too many projects overflows the left div

2007-04-10 11:51 - Jeffrey Jones

Description	
<p>If you look at the attached screenshots you can see that the project list on the left is overflowing the Div without extending it.</p> <p>There are a few possible solutions but to be honest I think the following would be the best.</p> <ol style="list-style-type: none">1. Remove the project listing from the vertical left hand navigation bar (div id="subcontent").2. Have the "Projects" button in the top nav (div id="navigation") take you to a page that lists all projects you are a member of as well as public ones.3. Fix the overflow as well (see the favourites bit below) <p>This will mean that the user has only one place to go to when they need to change projects, this will make the user journey clearer.</p> <p>Maybe allow the user to specify a few projects as "favourites" and have them appear in the left hand navigation area under "My projects".</p> <p>This came to light as I am importing projects from a legacy system, 103 projects will be imported so you can image the size of the overflow in the vertical left hand nav.</p> <p>Jeff</p>	

History
