Redmine - Feature #3912
Add support for AND’s and OR’s in search
2009-09-24 02:10 - Burt Culver

Status: New

Description
I’d like to make a search list that checks for two different phrases in the subject line. I can’t do that currently and have to have two different lists. Add the ability to match on “this OR that” or “this AND that”.

This would be nice, but in my personal opinion, I would rather see a generic text box that had support for advanced queries like this à la Google search.

#2 - 2011-05-27 16:24 - Etienne Massip
- Target version set to Candidate for next major release

Would like to see wildard search, means prefix (myserachword) search, suffix search (mysearchword), exact match search ("my search term in double quotes, but nothing else") and regular expressions (*. this is my number: /d+)
