Add support for AND's and OR's in search

I'd like to make a search list that checks for two different phrases in the subject line. I can't do that currently and have to have two different lists. Add the ability to match on "this OR that" or "this AND that".

I would be nice, but in my personal opinion, I would rather see a generic text box that had support for advanced queries like this à la Google search.

Agreed.

Would like to see wildcard search, means prefix (myserachword) search, suffix search (mysearchword), exact match search ("my search term in double quotes, but nothing else") and regular expressions (" this is my number: /d+")
