Description

Redmine has a flexible framework but terrible UX.

I am wishing for an automatic feature here.

Since the activity of a user is recorded, why don't they be recorded as working hours related to particular issues, whether automatically or manually.

It would be easier especially when someone is editing and expanding the contents of an issue, the working hours should be contributed to that issue.

Maybe the ERPMine plugin is interesting for you: <https://www.redmine.org/plugins/wk-time>
