

Redmine - Feature #3963

Associate a hostname to a particular project

<b>Description</b> It would be nice if we could associate a hostname to a particular project. As an example, with correct DNS and webserver configurations, I'd like to set :  <a href="#">www.project1.com</a> --> my.redmine.server/projects/project1 or project1.my.redmine.server --> my.redmine.server/projects/project1  That way, we could host multiple projects with their own domain names on the same redmine server.

Multiple domain names means multiple sessions and authentications.  
How would you handle that?

#2 - 2009-10-11 12:06 - Julien Cornuvel

Well, I wouldn't. The domain name would just be a "shortcut" to the relevant project. But authentication and sessions would remain common. Is it possible ?
