| Description | |
| <p>Hi,</p> <p>We had a lot of customfields on our projects and we would appreciate to add more information on it.</p> <p>There is a description but it only to be visualized by users.</p> <p>We'd like to have a field like 'Comment' to add comment on custom field in order to add information of the context. This field could be only view by super administrator</p> <p>Exemple 1 : 2 custom fields witch same visible name (but one with 1 space in name), i'd like to specify the use of those fields Exemple 2 : custom field are too short, the comment can help the administrator to best maintain this custom field</p> <p>Will it be usefull for other people ?</p> | |
