Description

Hi,

We had a lot of customfields on our projects and we would appreciate to add more information on it.

There is a description but it only to be visualized by users.

We'd like to have a field like 'Comment' to add comment on custom field in order to add information of the context.
This field could be only view by super administrator

Exemple 1 : 2 custom fields witch same visible name (but one with 1 space in name), i'd like to specify the use of those fields
Exemple 2 : custom field are too short, the comment can help the administrator to best maintain this custom field

Will it be usefull for other people ?
