

Redmine - Feature #39733

Make it possible to change the logo with a custom image (support svg, png etc) via UI

Description At this moment, there are various ways to change the official redmine logo with your company logo: generally you need to edit the application.css file or use node npm in the case of sass-based themes. It would be appropriate to make this operation more user friendly, allowing you to change the image via the UI (perhaps from administration-settings-display).
