Description			
The current query filters and options use HTML tables for the layout, which introduces issues with wide form elements on narrow screens.			
The attached patch which was extracted from Planio replaces the layout tables with a flex layout. The look and feel in desktop browsers should stay unchanged, but on narrow screens like mobile phones filter rows that previously just exceeded the screen width will now wrap to a new row.

here's the patch :)

Also: this change has the potential to break plugins which use the changed partials and rely on the old table markup in their stylesheets or Javascript.

Redmine [6.0.0](#) is a good moment to deliver this potential breaking change.

Thanks for improving the layout. However, there seems to be one problem. The layout of the UI for selecting whether or not to display a column of issues is broken due to this change.
Where the problem occurs:

- Administration => Settings => Projects tab => Projects list defaults
- Administration => Settings => Projects tab => Issues list defaults
- My page => Add: Reported issues => Click setting icon

Thank you for fixing the problem so quickly! After applying the patch, I was able to verify that the problem was fixed on the three reported screens. I found a problem with "Administration => Settings => Time tracking tab => Timelog list defaults" as well. Sorry I didn't report it first.
